• Thursday, May 25 - **Graduation Practice!** All Seniors **must** be present at 2:30 for practice.

• Friday, May 26 - **Graduation Day!** Panhandle High School Auditorium at 8 p.m.

### NOTICE OF INITIATION OF FIVE-YEAR REVIEW

The National Nuclear Security Administration (NNSA) Production Office [NPO] of the U. S. Department of Energy/National Nuclear Security Administration announces the start of the Five- Year Review of the Selected Remedy for the Pantex Plant Site, as required by Section 121 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and Hazardous Waste Permit No. 50284. This review will begin May 1, 2017 and is scheduled to be signed by August 25, 2018. Pantex continues to operate and maintain the remedial actions that comprise the Selected Remedy. This is the second Five-Year Review conducted since the Selected Remedy was approved in the Record of Decision in September 2008.

NPO will be conducting a review of the Selected Remedy for the Pantex Plant Site, in conjunction with the U.S. Environmental Protection Agency (USEPA) and the Texas Commission on Environmental Quality (TCEQ) to ensure that the Selected Remedy remains protective of human health and the environment. The predominant contaminants at the Site are high explosives, solvents, perchlorate and chromium. The Selected Remedy is comprised of the following components for protection of human health and the environment:

#### For soil units

- Land use controls for restricting access and maintaining protective measures for workers.
- Protective covers of clean soil for containing contaminants in landfilled material and ditch liners.
- A Soil Vapor Extraction System to finish removing solvents released into subsurface soils at the Burning Ground.

#### For impacted perched groundwater

- Land and groundwater use controls for restricting access, drilling, and perched groundwater use without prior treatment.
- Pump and treat systems for stabilizing contaminants and reducing saturation.
- *In situ* treatment zones to reduce contaminant concentrations to groundwater protection standards where pump and treat systems are not effective
- A Long-Term Monitoring network of perched groundwater and Ogallala Aquifer wells to gather data needed to determine remedy effectiveness and provide for early detection of unexpected conditions.

Information about the Selected Remedy and progress toward achieving the established goals is available via the Internet at <http://www.pantex.com/mission/Pages/environment.aspx>, the Amarillo Central Public Library, 413 E. 4th, Amarillo, Texas, and the Pantex Plant Administrative Record file located at Pantex Plant, on FM 2373 and U.S. Highway 60, Amarillo, Carson County, Texas.

The public is invited to provide pertinent information and observations for consideration during the review by telephone to Mr. Steven Wyatt, NPO Public Affairs Manager at (865) 576-9918 or by e-mail to: [Steven.Wyatt@NPO.doe.gov](mailto:Steven.Wyatt@NPO.doe.gov). Requests for additional information about the review process may be submitted in the same manner.
